EMBEDDED ANALYTICS IN INFORMATION VISUALIZATION

Abstract of the Invention

Under the present invention, a system, method, and program product for are provided for performing calculations assigned to the relationships displayed in information visualization models, and for displaying the results of the calculations. The method comprises: displaying an information visualization model having a plurality of nodes, wherein at least one node in the information visualization model is configured to: perform a calculation based on values displayed by other nodes in the information visualization model; and display a result of the calculation.
